What's New in the Apex Video Converter Pro?

Apex Video Converter Pro is an easy to use video conversion software that works with the most popular formats on the market, providing a great amount of configuration options for each of these formats. The interface is nothing special, so beginners should stay on the safe side all the time, but it's strongly recommended to pay attention to every single setting of the output file. The main window is being used to display information about the files to be processed, which means that yes, Apex Video Converter Pro supports batch conversion as well. You can see the source video, split span, frame size, output type and conversion status straight from the main window, pretty useful for those who wish to avoid wasting too much time with the conversion task. As for the supported formats, Apex Video Converter Pro can work with a wide array of formats, including AVI, Divx, ASF, WMV, WMA, MPEG, MOV, QT, RM and RMVB, all displayed in separate tabs in the main window. As we said, each for these formats comes with its very own pack of settings, so for AVI for example you can configure the AVI codec, framerate, sound codec, video resolution and output folder. The conversion speed is quite remarkable and the system doesn't seem to be stressed up too much, although Apex Video Converter Pro uses a moderate amount of resources to get the job done. All in all, it's pretty clear that Apex Video Converter Pro is one of the top products in this particular category, offering an intuitive interface and a great amount of configuration options for each supported format. @nolet_ceri - It's not just superfast, It's the best! I'm using it for batch conversion now, and it runs pretty smoothly, even on my 2003 laptop and WinXP/Ubuntu. A few things to remember: - Put all files in a folder, don't just drag and drop them all on the app - You need to copy all files before converting, it won't do it itself - Go to Advanced and change the quality settings, this will improve the quality, but also use a lot of resources - I also suggest to set the output file to MPG or M2TS, with no subtitles or closed Captions. So, I've used it for several files, all AVI, WMA or MP3, about 250GB of songs,
